ELISABETH

The Mitral Valve Apparatus Visualizer

Specifically designed for mitral subvalvular apparatus exposure during valve repair. Particularly useful and helpful in minimally invasive procedures when mitral valve exposure is difficult or inadequate.

- Designed in two configurations (Left and Right) in order to have better adaptability to the anatomy of the papillary muscles. In very large anuli, they can be used together to achieve better visualization and stability.
- Stability System design assures optimal positioning of the device in the natural anulus
- Easy to use
